**BLUE ARC ENGINEERING RELOCATES TO NEW FACILITY IN GREENFIELD, INDIANA**

Greenfield, Indiana – Blue Arc Engineering, LLC recently expanded their operations and moved into a new building in northern Greenfield. The new facility provides the manufacturing and the design engineering space necessary to accommodate Blue Arc's rapid growth.

The new building includes 48,000 square feet of manufacturing and assembly space, as well as 5,000 square feet of office space. BlueArc recently held Opening Ceremonies for customers, suppliers, and the community to tour the facility, see the custom equipment offered, and meet the staff. "Taking care of our customers and manufacturing superior custom material handling equipment are the keys to our success and growth. I believe our new facility will allow us to exceed our customer's expectations and deliver our products on time and within budget more effectively," said Jason Effing, General Manager of Blue Arc Engineering.

Blue Arc specializes in the design and assembly of unique and specialty equipment for the material handling industry. The company's niche is creating products not readily available such as: robotic cell in-feed and discharge conveyors, transfer cars, vertical material lifts, pallet dispensers, plastic belt conveyor for singulation and sortation, etc. The current business model emphasizes upfront advanced engineering detail design processes through 3D product modeling, innovative designs, and cost competitive solutions with on site prototyping.
